

Universitas Gadjah Mada, which has taken on a new status as a state-owned legal entity since December 26, 2000, is the oldest and largest university in Indonesia. The university has an impressive collection of buildings, laboratories and equipment, as well as guesthouse facilities.

The Faculty of Medicine UGM (FM-UGM) is an academic institute for both undergraduate and post-graduates (masters and clinical specialist). UGM is also running 6 Masters programs: Biomedical, Public Health, Tropical Medicine, Occupational Health, Clinical Health, and Medical Education.

The faculty also supported a multidiscipline international masters program of biomedical engineering through Asia-link project, which is a collaboration between Groningen University, Belgium, India and Indonesia (UGM and Bandung Technical Institute). The FM-UGM has a well established research unit.

Center for Tropical Medicine Universitas Gadjah Mada was established in 1996 to address the tropical health problems of individuals and population, and the concomitant health care delivery issues through its programmatic approach to graduate education, research and technology that directly support human resources development in Indonesia related to tropical medicine.

The Center for Tropical Medicine, Universitas Gadjah Mada is committed to address the impending needs to facilitate application of existing technologies, development of new tools and discovery and dissemination of new knowledge of major infectious diseases through research and training in infectious diseases of public health importance.

To support education and research, our center as part of Faculty of Medicine UGM also has an extensive integrated lab facilities encompassing research labs (molecular biology and immunology; tropical medicine and parasitology; biotechnology; microbiology and statistics).
